

GODSGAME

is a Community Focused and
NFT powered Gaming Ecosystem.

Twitter: @GodsgameNFT

Site: www.godsgame.co

God's Vision

Create an **ecosystem** where the **brightest minds**
in Latin America Crypto Space will gather.

Realm's Tokenomics

The funds will be used to develop an
ecosystem of blockchain games called **Godsgame**.
The games will be developed by investing in projects
built by our holders. Godsgame ecosystem will find,
within the holders, the team needed to develop
and deliver each project.

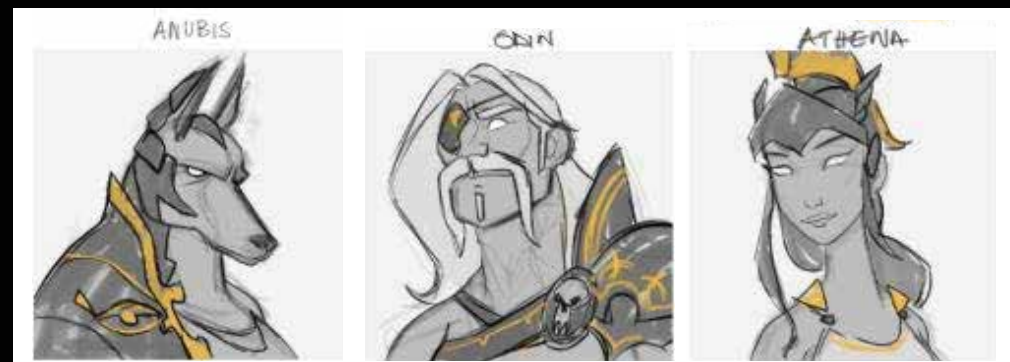

Our first blockchain (Play and Earn) game will be released Q3 2022.

Holy Roadmap

After mint, holders of the first Godsgame NFT, called “Body”, will journey through an adventure inside Godsgame Ecosystem, until they have the full set of Godsgame, called “Avatar”.

First, they will participate in tournaments (real game events) that will allow holders to mint a second NFT called “Artifact” (100% free NFT, exclusive to Godsgame NFT holders).

NFTs - Work in progress

Having the first NFT "Body" and the second NFT "Artifact", holders will participate in community events, allowing them to mint the third NFT called “Holy Land” (100% free NFT, exclusive for Godsgame NFT 01 - Body and NFT 02 - Artifact holders).

With the entire set of Godsgame NFT completed, holders of NFT 01 "Body", combined with NFT 02 "Artifact" and NFT 03 "Holy Land", will be able to claim a token called Godsgame "\$GGM".

The entire set of Godsgame NFTs, when staked, will be called "Avatar" and will yield tokens that will be key to participate in the entire ecosystem. Also stakers will receive a pfp nft representing their staked set.

Godsgame ecosystem will become a launchpad for blockchain projects in Latin America, bridging companies and the metaverse.

How Godsgame Bridge will work?

Godsgame will incubate companies that want to launch their NFT projects and will onboard them into the ecosystem and community. As a company, you will have full support to gather resources, find the best assets and team members (developers, artists, smart money, entrepreneurs, creators), receive feedback from members, and have access to first testers and real users. Lastly, the projects will have the ability to integrate their systems with our ecosystem and tokenomics in order to help launch them into the blockchain community.
